

Weekly Diary

For

Industrial Training

At

Name of Industry – Rashtriya Chemicals and Fertilizers Limited

From 17-5-19 To 29-6-19

Name of Supervisor –Mr Rohan Bagul

Designation of Supervisor – Deputy Manager

Name of Student Ryan Rodricks

Enrollment no 1700030004

Branch of Engineering – Computer Technology

Name of Polytechnic - Shah And Anchor Kutchhi Polytechnic

Week 1: From 17-5-19 To 25-5-19

Expected Work:

- i. Study of organization chart of Industry/plant with responsibilities of the different posts
- ii. General study of industry ,its location, its history and its product range, its size, number of employees, its turnover etc.

2	<p>Rashtriya Chemicals & Fertilizers Ltd. (RCF) is a Public Sector Undertaking (PSU) in India under the Ministry of Chemicals and Fertilizers of the Government of India, based in Mumbai. [2] RCF is the fourth largest producer of fertilizers in India (after Coromandel international, NFL, Chambal and GSFC. Since inception, RCF has successfully and safely operated two dozen chemical and fertilizer plants for the past five decades at Trombay. The Company has operated plants at Thal for last thirty years and maintained the quality of environment. This itself has been a huge challenge and demonstrates company's commitment towards environment and concern about the neighbourhood. RCF has spent more than Rs. 400 crore over the years in various pollution abatement and environment improvement schemes. This includes massive drive for tree plantation under "Chembur Green" Project. Complete transparency is maintained by the Company in dissemination of environment related data and information. Through four dedicated continuous Ambient Air Monitoring Systems located around the boundary of the factory, real time emission levels are displayed through an illuminated board placed at the entrance of the factory for public viewing. No wonder that the company is maintaining ISO 14000 accreditation for environment since fifteen years. Both the manufacturing units are accredited with ISO 9000 for quality and OHSAS 18000 for Occupational Health and Safety.</p> <p>RCF also strongly believes in discharging its Corporate Social Responsibility diligently with an objective to benefit the needy and for general good of the society. A host of CSR activities are undertaken by the company which includes adoption of villages, providing drinking water, providing schooling facilities and scholarship, providing Mid-day meal, providing special coaching facilities to poor students to enable them get admission in IITs and NITs, Community Medical facility through Mobile Medical Vans, special measures for SC/ST and under privileged, providing training to farmers etc. As part of its social efforts, the company has adopted 63 villages in Maharashtra, Karnataka and Andhra Pradesh for overall development, a program that has brought about qualitative changes in the economic status of the farmers and people of various professions in the village. RCF believes in providing one stop shop to farmers by marketing its own products and procuring other products for farmers through imports or tie-ups with other manufacturers. Though the manufacturing plants are distributed in two locations within Maharashtra, RCF markets its products throughout the length and breadth of the country with its products reaching even the far off north eastern states of India.</p> <p>To promote balanced use of fertilizers for improving the farm productivity and also to help in maintaining soil health, RCF has established 12 (twelve) static Soil Testing Laboratories (STL) in the country at strategic locations, namely Mumbai, Kolhapur, Nagpur, Ahmednagar Satara, Latur Hassan, Vijaywada, Kolar, Suryapet, Raipur, Nanded and Lucknow covering the soil testing activity in the districts around these STLs. In addition to the static STLs, the Company</p>

	also operates 6 (six) Mobile Soil Testing Labs. This service is rendered free of cost to farmers. Since last 40 years, RCF has analysed more than 50 lakh soil samples.
--	---

RCF has sought to bridge the gap between Research Scientist and the farmer by setting up dedicated Farmer Training Centres at Nagpur and Thal. RCF publishes a monthly farm magazine which started in 1967 and was called "Trombay Sheti Patrika". This farm magazine is now renamed as "RCF Sheti Patrika". Sheti Patrika disseminates latest agricultural information & practices to the farming community. This magazine is distributed free of cost to the farmers and presently it has a readership of over 1.50 lakh farmers. The Company has also introduced a "Toll Free Helpline – 1800 22 3044" service through which the farmers can get advice and suggestions on their agriculture and farming related queries. The Company is poised for growth through implementation of major projects which will help reduce the demand-supply gap of fertilizer in the country. Company is engaged in developing a project for 1.27 million MT Urea plant at Thal and another of 1.27 million MT Urea plant based on coal gasification at Talcher. Apart from the proposed fertilizer projects in India, RCF is looking for opportunities for setting up Joint Venture Projects in resource rich countries. RCF does what it commits. The commitment is translated in a written document – the Memorandum of Understanding (MOU) with Government of India. The performance is evaluated independently by the Department of Public Enterprises. RCF has been consistently achieving best rating of "Excellent" for past several years. Having accredited with "Mini-Ratna" status by the Government of India, it is now poised to get "Navratna" status. RCF has maintained a good financial position.

iii.

Location: 1.Trombay Unit:

Multiproduct integrated fertilizers & process chemicals factory in Mumbai spread across 765 acres (including township)ISO 14001,ISO50001, OHSAS- 18001 & ISO- 9001 accredited, Manufactures Ammonia, Urea, Suphala, ANP, Methanol, Nitric Acid, Sulphuric Acid, etc.

2. Thal Unit:

Large producer of Urea along with Industrial Chemicals located 100 km south of Mumbai spread across 997 acres (including township)ISO 14001, OHSAS- 18001 & ISO- 9001 accredited Manufactures Ammonia, Urea, Methylamines, Formic Acid etc.

History:

Rashtriya Chemicals and Fertilizers Limited (a Government of India undertaking), was established in 1978 consequent to the reorganisation of Fertilizer Corporation of India. RCF manufactures Urea and Complex fertilizers (NPK) along with a wide range of Industrial Chemicals. It is 4th largest Urea manufacturer in India after IFFCO, NFL and KRIBHCO.[4]
[verification needed]

The Government of India (through the President of India) holds 75% of the share capital of the Company as of December 2018.[5]

product range:

It manufactures Urea (Ujjwala), Complex Fertilizers (Suphala), Bio-fertilizers, Micronutrients, 100 per cent water soluble fertilizers, soil conditioners and a wide range of Industrial Chemicals. It produces 23 lac MT Urea, 6.5 lac MT Complex fertilizers and 1.6 lac MT of Industrial Chemicals every year. fertilizer inputs like, DAP, MOP & NPK fertilizers. Besides fertilizer products, RCF also produces almost twenty industrial chemicals that are important for the manufacture of dyes, solvents, leather, pharmaceuticals and a host of other industrial products.

3

As per as given instructions by our guider, Rohan Bagul sir , we were told to implement a bootstrap template named “SB ADMIN 2” into asp.net empty web application. We then immediately started searching for bootstrap template online. We came across bootswatch.com and found the template we were looking for. We downloaded the template which was in a zip file. We extracted the zip file using WinRar. We then learnt to import the template into asp.net empty web application in visual studio from online. To import the template we had copy all the files into the empty web application (such as CSS,vendor ,img, js , scss) into the ASP.net web form application. We were then told to edit the web page and add a form which would accept input from the user. We then learnt JavaScript, CSS, Html to edit the web page. We added the required input fields which would be used to gather the necessary data from the user.

                <option>--BB--</option>
                <option>--CC--</option>
            </select>
        </div>
```

[illegible]

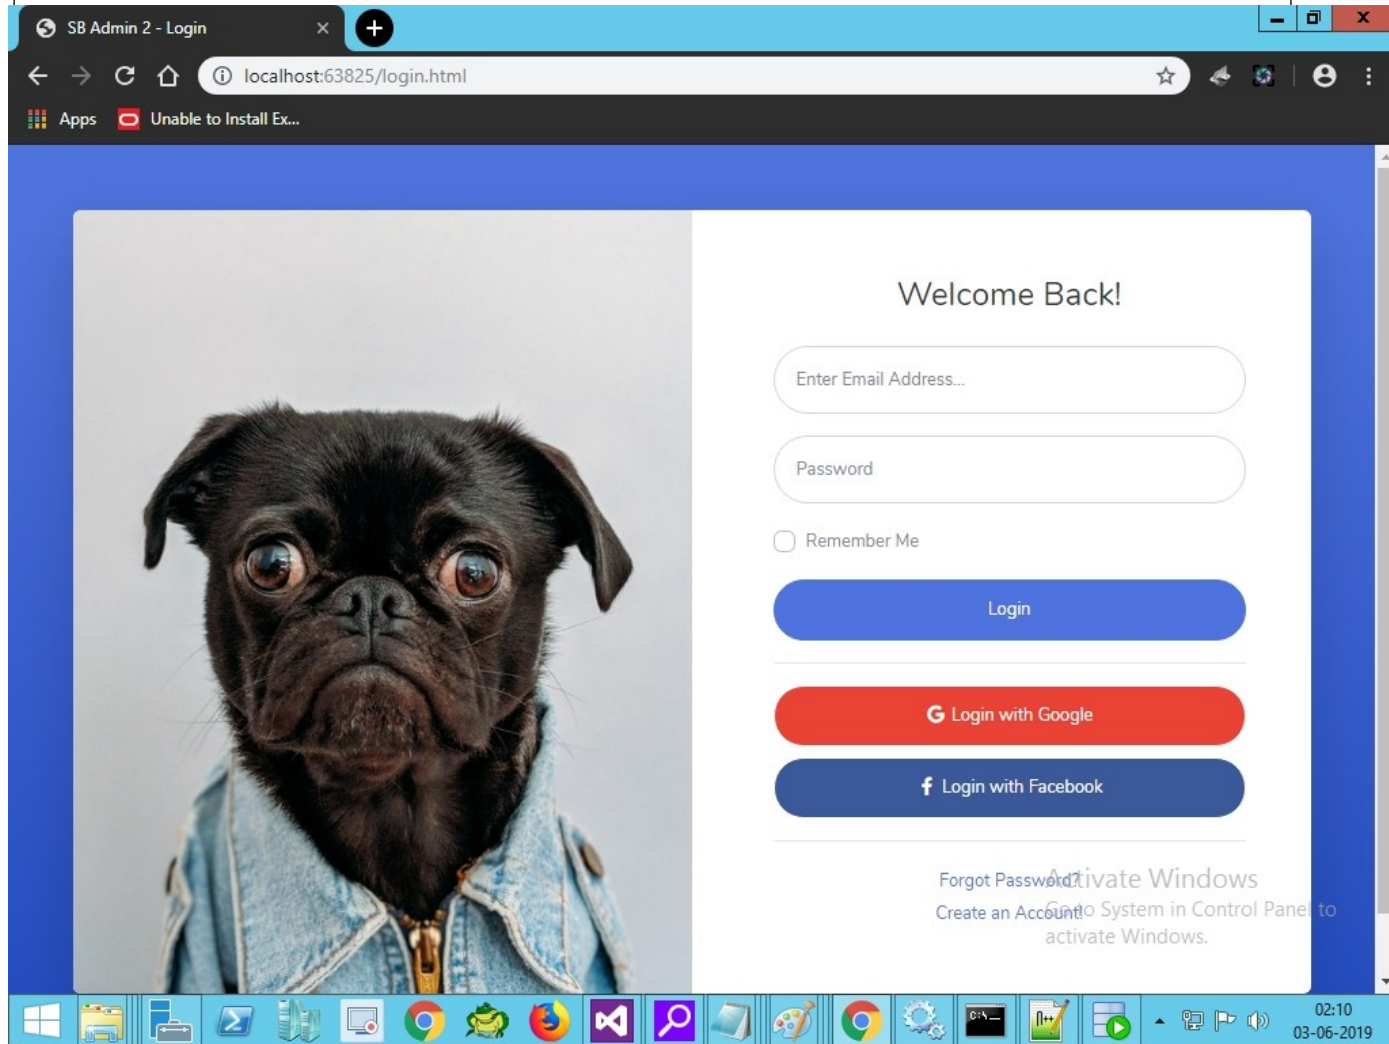

4	<p>We were then told to implement a login page which would re-direct to the form made yesterday and had to set the login page as start-up page (Displays the login page when someone goes to the website). We imported JavaScript code onto the web page using script tag. The code consisted of 'if' and 'else' condition which would check for the correct username and password , if the username and password were incorrect it would display an error message and reject any attempts made to bypass it. The only way to enter the form page was by entering the valid username and password</p> <p>Source Code</p> <ol style="list-style-type: none"> 1. <html> 2. <head> 3. <title> 4. Login page 5. </title> 6. </head> 7. <body> 8. <h1 style="font-family:Comic Sans Ms;text-align="center";font-size:20pt; 9. color:#00FF00;> 10. Simple Login Page 11. </h1> 12. <form name="login"> 13. Username<input type="text" name="userid"/> 14. Password<input type="password" name="pswrd"/> 15. <input type="button" onclick="check(this.form)" value="Login"/> 16. <input type="reset" value="Cancel"/> 17. </form> 18. <script language="javascript"> 19. function check(form) 20. {

	<pre>21. 22. if(form.userid.value == "myuserid" && form.pswrd.value == "mypswrd") 23. { 24. window.open('blank1.html') 25. } 26. else 27. { 28. alert("Error Password or Username") 29. } 30. }</pre>
--	---

31. </script>

32. </body>

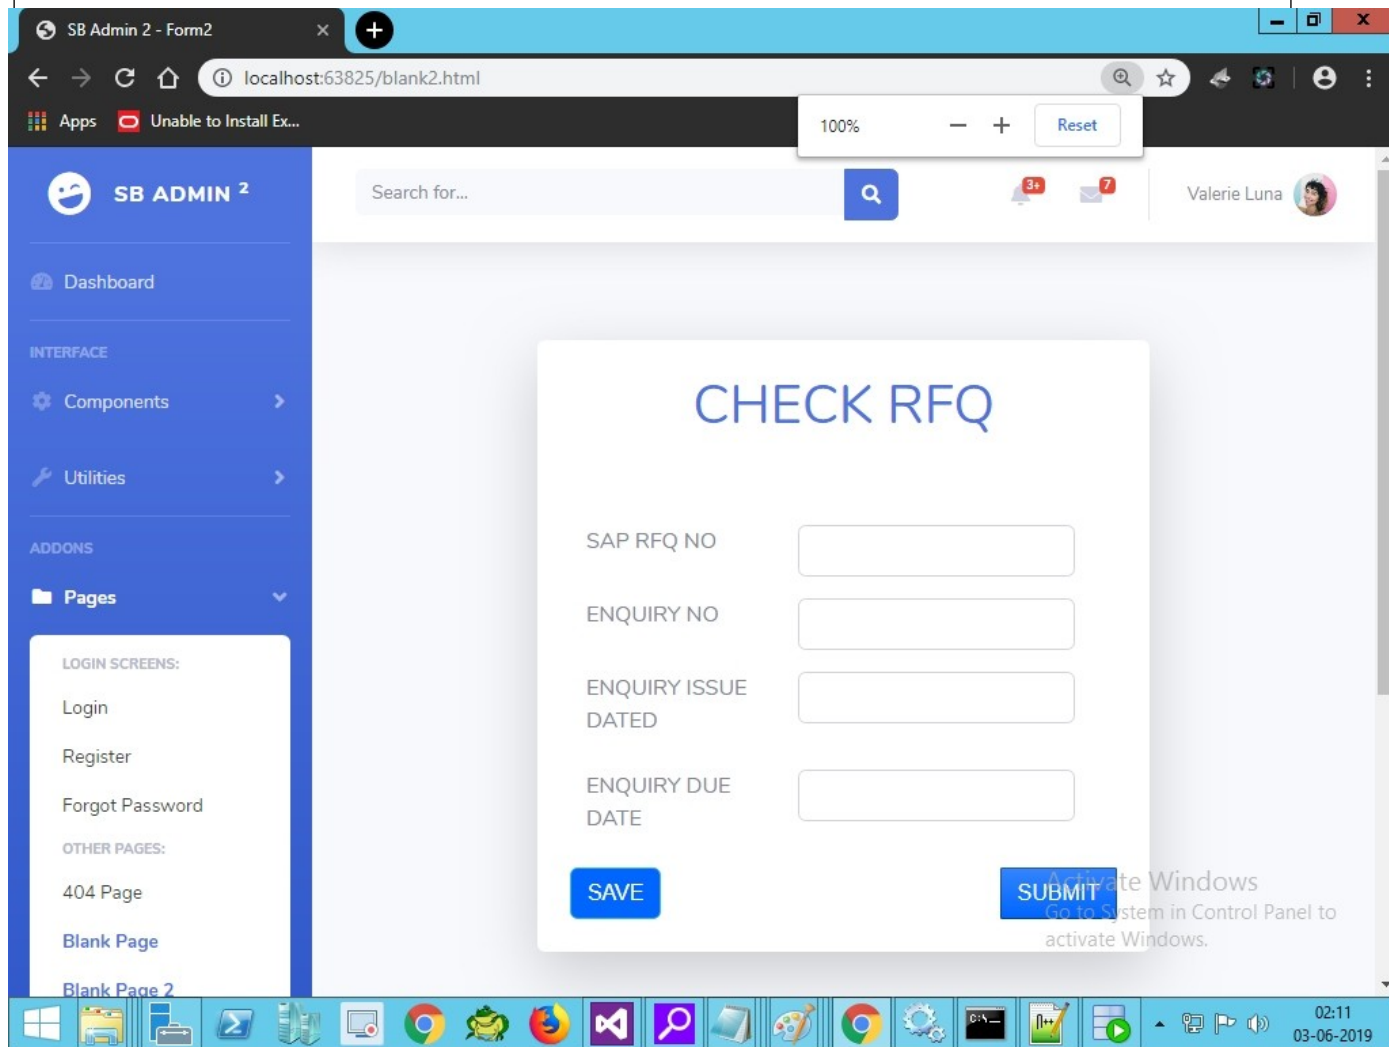

33. </html>

5

We were then told to create another form which would appear only when the first form will be filled.

	<p>We then started working on it. We used input fields which would work as requiring data from the user</p> <p>We set the input type to 'date' to get calendar information.</p>

2	<p>Types of components used</p> <p>Personal computer</p> <p>Basic hardware components of a modern personal computer, including a monitor, a motherboard, a CPU, a RAM, two expansion cards, a power supply, an optical disc drive, a hard disk drive, a keyboard and a mouse</p> <p>Inside a custom-built computer: power supply at the bottom has its own cooling fan</p> <p>The personal computer, also known as the PC, is one of the most common types of computer due to its versatility and relatively low price. Laptops are generally very similar, although they may use lower-power or reduced size components, thus lower performance.</p> <p>Case</p> <p>Main article: Computer case</p> <p>The computer case encloses most of the components of the system. It provides mechanical support and protection for internal elements such as the motherboard, disk drives, and power supplies, and controls and directs the flow of cooling air over internal components. The case is also part of the system to control electromagnetic interference radiated by the computer, and protects internal parts from electrostatic discharge. Large tower cases provide extra internal space for multiple disk drives or other peripherals and usually stand on the floor, while desktop cases provide less expansion room. All-in-one style designs include a video display built into the same case. Portable and laptop computers require cases that provide impact protection for the unit. A current development in laptop computers is a detachable keyboard, which allows the system to be configured as a touch-screen tablet. Hobbyists may decorate the cases with colored lights, paint, or other features, in an activity called case modding.</p> <p>Power supply</p> <p>Main article: Power supply unit</p> <p>A power supply unit (PSU) converts alternating current (AC) electric power to low-voltage DC power for the internal components of the computer. Laptops are capable of running from a built-in battery, normally for a period of hours.[4]</p> <p>Motherboard</p> <p>Main article: Motherboard</p> <p>The motherboard is the main component of a computer. It is a board with integrated circuitry that connects the other parts of the computer including the CPU, the RAM, the disk drives (CD, DVD, hard disk, or any others) as well as any peripherals connected via the ports or the expansion slots.</p> <p>Components directly attached to or to part of the motherboard include:</p> <p>The CPU (central processing unit), which performs most of the calculations which enable a</p>

computer to function, and is sometimes referred to as the brain of the computer. It is usually cooled by a heatsink and fan, or water-cooling system. Most newer CPUs include an on-die graphics processing unit (GPU). The clock speed of CPUs governs how fast it executes instructions, and is measured in GHz; typical values lie between 1 GHz and 5 GHz. Many modern computers have the option to overclock the CPU which enhances performance at the expense of greater thermal output and thus a need for improved cooling. The chipset, which includes the north bridge, mediates communication between the CPU and the other components of the system, including main memory; as well as south bridge, which is connected to the northbridge, and supports auxiliary interfaces and buses; and, finally, a Super I/O chip, connected through the southbridge, which supports the slowest and most legacy components like serial ports, hardware monitoring and fan control.

Random-access memory (RAM), which stores the code and data that are being actively accessed by the CPU. For example, when a web browser is opened on the computer it takes up memory; this is stored in the RAM until the web browser is closed. RAM usually comes on DIMMs in the sizes 2GB, 4GB, and 8GB, but can be much larger.

Read-only memory (ROM), which stores the BIOS that runs when the computer is powered on or otherwise begins execution, a process known as Bootstrapping, or "booting" or "booting up". The BIOS (Basic Input Output System) includes boot firmware and power management firmware. Newer motherboards use Unified Extensible Firmware Interface (UEFI) instead of BIOS.

Buses that connect the CPU to various internal components and to expand cards for graphics and sound.

The CMOS battery, which powers the memory for date and time in the BIOS chip. This battery is generally a watch battery.

The video card (also known as the graphics card), which processes computer graphics. More powerful graphics cards are better suited to handle strenuous tasks, such as playing intensive video games.

Expansion cards

Main article: Expansion card

An expansion card in computing is a printed circuit board that can be inserted into an expansion slot of a computer motherboard or backplane to add functionality to a computer system via the expansion bus. Expansion cards can be used to obtain or expand on features not offered by the motherboard.

Storage devices

Main article: Computer data storage

A storage device is any computing hardware and digital media that is used for storing, porting and extracting data files and objects. It can hold and store information both temporarily and permanently, and can be internal or external to a computer, server or any similar computing device. Data storage is a core function and fundamental component of computers.

Fixed media

Data is stored by a computer using a variety of media. Hard disk drives are found in virtually all older computers, due to their high capacity and low cost, but solid-state drives

	<p>are faster and more power efficient, although currently more expensive than hard drives in terms of dollar per gigabyte,[5] so are often found in personal computers built post-2007. [6] Some systems may use a disk array controller for greater performance or reliability.</p> <p>Removable media To transfer data between computers, a USB flash drive or optical disc may be used. Their usefulness depends on being readable by other systems; the majority of machines have an optical disk drive, and virtually all have at least one USB port.</p> <p>Input and output peripherals Main article: Peripheral Input and output devices are typically housed externally to the main computer chassis. The following are either standard or very common to many computer systems.</p> <p>Input Input devices allow the user to enter information into the system, or control its operation. Most personal computers have a mouse and keyboard, but laptop systems typically use a touchpad instead of a mouse. Other input devices include webcams, microphones, joysticks, and image scanners.</p> <p>Output device Output devices display information in a human readable form. Such devices could include printers, speakers, monitors or a Braille embosser.</p>
3	<p>We were given a task to display n number of input fields based on the value the user provided. We then began working on the activity. We ended up using 'for loop' which would create n number of fields based on what the user would input in a textbox. We then used a button to display the input fields which was clicked after the value was inputted by the user had entered his/her value. The 'for loop' was generating a label and input field everytime it ran based on the value the user had inputted.</p>

The screenshot shows the SB ADMIN 2 dashboard. On the left is a blue sidebar with navigation links: Dashboard, Components, Utilities, and Pages. The main content area is white and features a form titled 'FORM 3'. The form has three input fields: 'NO OF EXTENSION OF DUE DATE' with a dropdown menu showing 'OPEN', 'TECHNICAL BID OPENING DATE' with a text input showing 'dd-mm-yyyy', and 'NO OF OFFERS RECEIVED' with a text input. There are 'SAVE' and 'SUBMIT' buttons at the bottom of the form. A watermark 'Activate Windows' is visible in the bottom right corner.

#0066FF">SUBMIT</a></form>

    </div>

</div>
</div>
</div>
</div>
```

- 4 We had to create a fourth form and fifth form . The fourth form had to accept two inputs of type 'date' at the start and then we had to use a select field which would have two values 'Yes' and 'No'. When selecting 'Yes' it would display three labels and input fields which would work as a calendar which would accept date from the user when we select 'No' it would only display two labels and two input fields of type 'date'. We had to add another select field which would show a label and input field of type 'date' if we selected 'Yes'

```

5	<p>On the fifth day of week 2, we were told to download Oracle Database 12c for server and client and install it. We then created a server account and multiple client accounts to connect to the server. We then learnt about Oracle and its features in detail. Oracle Database 12c is a high-performance, enterprise-class database. Oracle released Oracle Database 12c into general availability July 1, 2013. According to Oracle, this is "the first database designed for the cloud." Oracle Database 12c also introduces 500 new features to the database, most notably pluggable databases and multitenant architecture. The Oracle Database 12c release 12.0.1.2 also features the Oracle Database 12c In-Memory, an optional add-on that provides in-memory capabilities. The in-memory option makes Oracle Database 12c the first Oracle database to offer real-time analytics. A database server is the key to solving the problems of information management. In general, a server must reliably manage a large amount of data in a multi-user environment so that many users can concurrently access the same data. All this must be accomplished while delivering high performance. A database server must also prevent unauthorized access and provide efficient solutions for failure recovery. The Oracle Server provides efficient and effective solutions with the following features:</p> <ul style="list-style-type: none"> • client/server (distributed processing) environments <p>To take full advantage of a given computer system or network, Oracle allows processing to be split between the database server and the client application programs. The computer running the database management system handles all of the database server responsibilities while the workstations running the database application concentrate on the interpretation and display of data.</p> <ul style="list-style-type: none"> • large databases and space management <p>Oracle supports the largest of databases, potentially terabytes in size. To make efficient use of expensive hardware devices, it allows full control of space usage.</p> <ul style="list-style-type: none"> • many concurrent database users <p>Oracle supports large numbers of concurrent users executing a variety of database applications operating on the same data. It minimizes data contention and guarantees data concurrency.</p> <ul style="list-style-type: none"> • high transaction processing performance <p>Oracle maintains the preceding features with a high degree of overall system performance. Database users do not suffer from slow processing performance.</p> <ul style="list-style-type: none"> • high availability
---	--

At some sites, Oracle works 24 hours per day with no down time to limit database throughput. Normal system operations such as database backup and partial computer system failures do not interrupt database use.

- controlled availability

Oracle can selectively control the availability of data, at the database level and sub-database level. For example, an administrator can disallow use of a specific application so that the application's data can be reloaded, without affecting other applications.

- openness, industry standards

Oracle adheres to industry accepted standards for the data access language, operating systems, user interfaces, and network communication protocols. It is an "open" system that protects a customer's investment.

Installation of the oracle server: Install and Configure Application Server

In this section, one machine will contain the DAS host server and the Application Server host-server1). Two additional servers (server1 and server2) will contain the Application Server instances. 1. Install Application Server using the Java ES installer with the Configure Now option. When you install Application Server, the Java ES installer also creates the node agent. .

2. Install the Application Server command line utilities on server1 and server2. You will install node agents on these servers (See Step 3c). The examples in this document use nodeagent1, nodeagent2, nodeagent3 as the node agent names

3. Configure the Application Server Cluster. Examples in the following steps use the Application Server asadmin command -line utility; however, you can use the Application Server Administration Console, if you prefer. A. Start the node agent on the DAS (host-server1). For example:

```
asadmin> start-node-agent --user admin --passwordfile password-file nodeagent1
```

B. Create node agents on server1 and server2. C.asadmin> create-node-agent --host host-server1.example.

```
com --port 4849 --user admin
```

D.--passwordfile password-file nodeagent2 E.asadmin> create-node-agent --host host-server1.example. com --port 4849 --user admin --passwordfile password-file nodeagent3

F. Start the node agents on server1 and server2. For example: G.asadmin> start-node-agent --user admin --passwordfile password-file nodeagent2

```
asadmin> start-node-agent --user admin --passwordfile password-file nodeagent3
```

H. Create the cluster on the DAS. For example: `asadmin create-cluster --user admin --passwordfile password-file amcluster`

I. Create a server instance for the cluster at the DAS. For example:

```
J.asadmin> create-instance --user admin --passwordfile password-file
```

```
K.--cluster amcluster --nodeagent nodeagent1
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance1
```

```
asadmin> create-instance --user admin --passwordfile password-file
```

```
--cluster amcluster --nodeagent nodeagent2
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance2
```

```
asadmin> create-instance --user admin --passwordfile password-file
```

```
--cluster amcluster --nodeagent nodeagent3
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance3
```

Install and Configure Access Manager Perform the following steps on all of the servers: 1. Install Access Manager using the Java ES installer with the Configure Later option. Access Manager requires Sun Java System Directory Server. Either install Directory Server

before you install Access Manager. Or, use an existing Directory Server.

2. Start all instances of Application Server to verify that they are installed properly.

3. Create an `amsamplesilent` file on the DAS machine (hostserver1) and set the following attributes:

4.`SERVER_NAME=host-server1` 5.`SERVER_HOST=$SERVER_NAME.example.com`

6.`SERVER_PORT=8082` 7.`ADMIN_PORT=4849` 8.`DS_HOST=qa-host-server1.example.com` 9.`DS_DIRMGRPWD=password`

10.`ROOT_SUFFIX="dc=example,dc=com"` 11.`ADMINPWD=password`

12.`AMLDAPUSERPWD=password` 13.`COOKIE_DOMAIN=.example.com`

14.`AM_ENC_PWD=""` 15.`NEW_OWNER=root` 16.`NEW_GROUP=other`

16.PAM_SERVICE_NAME=other 17.WEB_CONTAINER=AS8 18.
19.AS81_HOST=host-server1.example.com AS81_INSTANCE=amcluster

20.Save and deploy the amsamplesilent file. For example: amconfig -s amsamplesilent

21.Restart Access Manager and the cluster instance 22.Log in to Access Manager as amadmin on the DAS machine and add the additional server instances to the Platform server list. For more information, see Add Instances to the Platform Server List and Realm/DNS Aliases.

23.Copy the amsamplesilent file to /usr/tmp directory on both server1 and server2.

24.On the DAS machine, locate the AM_ENC_PWD property in amconfig.properties (located in /etc/opt/SUNWam/config):

am.encryption.pwd=RrO0vsw+sg8D1+ 3ldZ6imu9yhjhyksS2

25.Copy the value of the AM_ENC_PWD from the DAS machine and replace the value in the amsamplesilent file for both server1 and server2:

26.SERVER_NAME=server1

27.AM_ENC_PWD=RrO0vsw+sg8D1+3ldZ6imu9yhjhyksS2 28.

29.SERVER_NAME=server2

AM_ENC_PWD=RrO0vsw+sg8D1+3ldZ6imu9yhjhyksS2

30.Deploy the configuration file on server1 and server2. The applications will produce error messages when attempting to deploy, because the applications are already in the domain. The configuration files need to be created and the command line utilities need to be defined. To do so, run the amconfig command for each installed instance. For example:

amconfig -s /usr/tmp/ amsamplesilent

For more information, see the Access Manager Administration Guide.

31.Repeat these steps for other instances in the cluster. Add Instances to the Platform Server List and Realm/DNS Aliases

To add Access Manager instances to the Platform Server List and Realm/DNS Aliases, use the Access Manager Admin Console on the first host server (host-server1) 1. Log in to the Access Manager Console as amadmin on the first host server (host-server1).

2. In the Access Manager Console, click Configuration, System Properties, and then Platform.

3. Add each additional instance to the Platform Server List:

A. Under Instance Name, click New. B. In New Server Instance, add the Server and Instance Name . For example:

Server: `http://host-server1.example.com:8182` Instance Name: 02

C. Click OK to add the instance. D. After you have added all instances, click Save.

Your Platform Server List will look similar to this list: `http://host-server1.example.com:8182|01` `http://server1.example.com:8182|02`
`http://server2.example.com:8182|03`

In this example, all instances are on the same server. If instances are on remote servers, specify the remote host server names when you add the servers to the list. If you have instances on remote servers, update the Realm/DNS Aliases (sunOrganizationAliases) with the remote host names: 1. In the Access Manager Console on the first host server (hostserver1), click Access Control and then the root (top-level) realm under Realm Name.

2. Under Realm Attributes, add each remote instance to the Realm/DNS Aliases and then click Add. For example: `host-server2.example.com`

3. After you have added all remote instances, click Save. Your Realm/DNS Aliases will look similar to this list:

`host-server1.example.com` `server1.example.com` `server2.example.com`

Install Web Server as a Load Balancer

Install Web Server on one of the machines and configure it as a load balancer. For information, see the Sun Java System Web Server documentation at <http://docs.sun.com/app/docs/coll/1308>. 1.

Be sure to add the load balancer's site and address to Access Manager's platform list.

Add Listeners to the Clusters for the Load Balancer Log in to the machine that has Web Server configured as the

load balancer plug-in. You will create a listener for each instance of the cluster and the contexts roots for Access manager:-

1. Locate the `loadbalancer.xml` file. 2. Add the listeners to the file. For example: 3.

`<instance name="instance1" enabled="true" disabletimeout-in-minutes="60"`

`4.listeners="http://host-server1.example.com:8182"/>` 5.

	<p>6.listeners="http://server1.example.com:8182"/> 7. 8.listeners="http://server2.exapmle.com:8182"/> 9. 10. <web-module context-root="/amserver" enabled="true " disable-timeout-in-minutes="60" 11.error-url="sun-http-lberror.html" /> 12. 13.error-url="sun-http-lberror.html" /> 14. <web-module context-root="/ampassword" enabled=" true" disable-timeout-in-minutes="60" <web-module context-root="/amcommon" enabled=" true" disable-timeout-in-minutes="60" error-url="sun-http-lberror.html" /> 15.In loadbalancer.xml, change property name to the following: <property name="response-timeout-in-seconds" value="120 "/> 16.Restart the Web Server. Restart All Application Server Instances Restart all Application Server instances using the following commands:asadmin> stop-cluster --user admin --passwordfile passwordfile amcluster asadmin> start-cluster --user admin --passwordfile password -file amcluster <instance name="instance2" enabled="true" disabletimeout-in-minutes="60" <instance name="instance3" enabled="true" disabletimeout-in-minutes="60" error-url="sun-http-lberror.html" /> 15.In loadbalancer.xml, change property name to the following: <property name="response-timeout-in-seconds" value="120 "/> 16.Restart the Web Server. Restart All Application Server Instances Restart all Application Server instances using the following commands:asadmin> stop-cluster --user admin --passwordfile passwordfile amcluster asadmin> start-cluster --user admin --passwordfile password -file amcluster</p>
6	<p>We arrived on Rashtriya Chemical Fertilizer, Admin building. After we arrived there we were given a project and had to talk about it. I was given a project about writing and emails ethiques. I talked about how emails should include a clear direct subject line, using a professional email address example. we should always include our names and photos in our email address, we should think before sending the email address and make sure all the basic requirements and topics are covered in it. We should add punctuations to make it easy to understand and make sure not to spam emails again and again to the receiver.</p>

Weekly summarization of the above activities:

Created three web pages which would gather information from the user. Downloaded and installed Oracle database 12c. Made a server account and gave a presentation on writing and emails etiquettes.

Expected Work:

- i. Study of
: From 3-6-19 To 8-6-19

Production processes along with production planning and control procedures.

Day	Activities carried out
1	<p>PRODUCTION PROCESS & PLANNING:Software Development Life Cycle, SDLC for short, is a welldefined, structured sequence of stages in software engineering to develop the intended software product. Communication:This is the first step where the user initiates the request for a desired software product. He contacts the service provider and tries to negotiate the terms. He submits his request to the service providing organization in writing.</p> <p>Requirement Gathering:This step onwards the software development team works to carry on the project. The team holds discussions with various stakeholders from problem domain and tries to bring out as much information as possible on their requirements. The requirements are contemplated and segregated into user requirements, system requirements and functional requirements. The requirements are collected using a number of practices as given • studying the existing or obsolete system and software, • conducting interviews of users and developers, • referring to the database or • collecting answers from the questionnaires.</p> <p>Software Design:Next step is to bring down whole knowledge of requirements and analysis on the desk and design the software product. The inputs from users and information gathered in requirement gathering phase are the inputs of this step. The output of this step comes in the form of two designs; logical design and physical design. Engineers produce meta-data and data dictionaries, logical diagrams, data-flow diagrams and in some cases pseudo codes.</p> <p>Coding:This step is also known as programming phase. The implementation of software design starts in terms of writing program code in the suitable programming language and developing error-free executable programs efficiently. Testing:An estimate says that 50% of whole software development process should be tested. Errors may ruin the software from critical level to its own removal. Software testing is done while coding by the developers and thorough testing is conducted by testing experts at various levels of code such as module testing, program testing, product testing, in-house testing and testing the product at user's end. Early discovery of errors and their remedy is the key to reliable software.</p> <p>Integration:Software may need to be integrated with the libraries, databases and other program(s). This stage of SDLC is involved in the integration of software with outer world entities. Implementation:This means installing the software on user machines. At times, software needs post-installation configurations at user end. Software is tested for portability and adaptability and integration related issues are solved during implementation. Operation and Maintenance:This phase confirms the software operation in terms of more efficiency and less errors. If required, the users are trained on, or aided with the documentation on how to operate the software and how to keep the software operational. The software is maintained timely by updating the code according to the changes taking place in user end environment or technology. This phase may face challenges from hidden bugs and real-world unidentified problems. Disposition:As time elapses, the software may decline on the performance front. It</p>

	<p>may go completely obsolete or may need intense upgradation. Hence a pressing need to eliminate a major portion of the system arises. This phase includes archiving data and required software components, closing down the system, planning disposition activity and terminating system at appropriate end-of-system time.</p>
2	<p>Client installation for the server: To download the Oracle client directly from Oracle's website:</p> <ol style="list-style-type: none"> 1. Go to Oracle Database Software Downloads. 2. Under "Oracle Database 12c Release 1", below "(12.1.0.2. 0) - Enterprise Edition", to the far right of "Microsoft Windows x64 (64-bit)", click See All. 3. Click OTN License Agreement, read the license agreement , and then close the window. 4. Select Accept License Agreement. You will see a notification thanking you for accepting the OTN License Agreement and permitting you to download the software. 5. Scroll down to the appropriate Oracle client for your operating system: <ul style="list-style-type: none"> o 32-bit: Under "Oracle Database Client (12.1.0.2.0) for Microsoft Windows (32-bit)", click winnt_12102_client32.zip. This file requires 826.1 MB of free space on your hard drive. o 64-bit: Under "Oracle Database Client (12.1.0.2.0) for Microsoft Windows (x64)", click winx64_12102_client.zip. This file requires 846.3 MB of free space on your hard drive. <p>You may be prompted to enter a valid OTN username and password. Once you have done so, you will see the "File Download" dialog box. If you do not have an OTN username and password, see the instructions for getting one above.</p> <ol style="list-style-type: none"> 6. Save the file. 7. In Windows, navigate to the file, right-click it, and then select Extract all. 8. Select a destination folder for the extracted files, and then perform the extraction. 9. To launch the Oracle Client Installer, go to the destination folder, open the client directory, and then double-click setup.exe (the Oracle 12c setup file). <p>At this point:</p> <ul style="list-style-type: none"> o Windows may prompt you for an administrator username and password. Enter an administrator username and password to proceed. <p>Windows may present an "Open File - Security Warning" dialog box. Click Run to proceed. It may take a minute for the "Oracle Client Installer" window to appear. To see it, you may need to minimize any other application windows that are open.</p> <p>Download the client from IUware To download the Oracle client from IUware:</p> <ol style="list-style-type: none"> 1. Go to Oracle Client 12c and select the Oracle version that corresponds to your operating system (32-bit or 64-bit). 2. If you see a button that says Log in for access, click it. If prompted, log in with your IU username and passphrase. 3. Under "DOWNLOADS", click the .exe file listed (either Oracle 12c Client 32-bit.exe - 826.1 MB for 32-bit, or Oracle 12c Client 64-bit.exe - 853 MB for 64-bit). 4. In the "File Download - Security Warning" dialog box, click Save, select a destination folder, and then click Save. <p>You may see a warning similar to "Oracle 12c Client . . . is not commonly downloaded and could harm your computer ." It is safe to ignore this warning and close the dialog box.</p> <ol style="list-style-type: none"> 5. When the download is complete, to open the IUware installer, go to the destination folder, and then double-click the Oracle .exe file you just downloaded. 6. You'll see an "Open File - Security Warning" dialog box. Click Run. 7. A "7-Zip self-extracting archive" dialog box will open. For "Extract to:", either accept the

	<p>default (for example, c:\username\Downloads), or change to another directory to which to extract the contents of this file. Click Extract. The extraction will take a few minutes.</p> <p>8. In the extraction directory you specified above, doubleclick the folder called Oracle 12c Client 32-bit or Oracle 12c Client 64-bit.</p> <p>9. Double-click the client folder. 10.</p> <p>Double-click the setup file (of type "Application", not "Configuration Settings") to start the installation process.</p> <p>It may take a minute for the "Oracle Client Installer" window to appear. To see it, you may need to minimize any other application windows that are open.</p>
3	<p>We learnt about about schema which was a collection of database objects owned by a specific user. Those objects include tables, indexes, views, stored procedures, etc. In Oracle, a schema requires a user to be created. But you can create a user that has no schema (i.e, no objects). So in Oracle, the user is the account and the schema is the objects. It is possible in other database platforms to have a schema without a user. We then learnt about tablespaces which s a storage location where the actual data underlying database objects can be kept. It provides a layer of abstraction between physical and logical data, and serves to allocate storage for all DBMS managed segments. (A database segment is a database object which occupies physical space such as table data and indexes.) Once created, a tablespace can be referred to by name when creating database segments. We then learnt about roles and user privileges. A user privilege is a right to execute a particular type of SQL statement, or a right to access another user's object. The types of privileges are defined by Oracle. Roles, on the other hand, are created by users (usually administrators) and are used to group together privileges or other roles. They are a means of facilitating the granting of multiple privileges or roles to users.</p>
4	<p>On this day, we downloaded SQL developer from http://download.oracle.com/otn/java/sqldeveloper/ . We were then told to edit the tnsnames.ora file from the directory where Oracle database 12g was installed.</p>

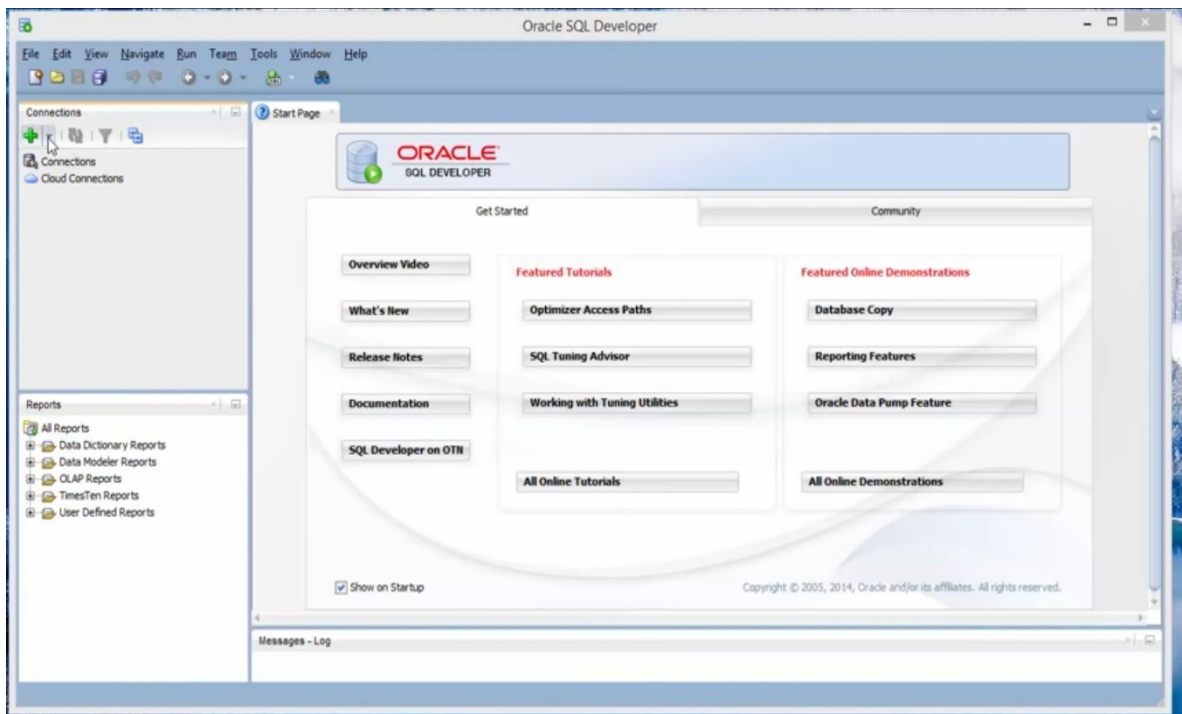

A `tnsnames.ora` file can contain net service names with one or more connect descriptors. Each connect descriptor can contain one or more protocol address. The basic syntax for `tnsnames.ora` file is given below:

```
net_service_name=
(DESCRIPTION=
  (ADDRESS=(protocol_address_information))
  (CONNECT_DATA=
    (SERVICE_NAME=service_name)))
```

//End

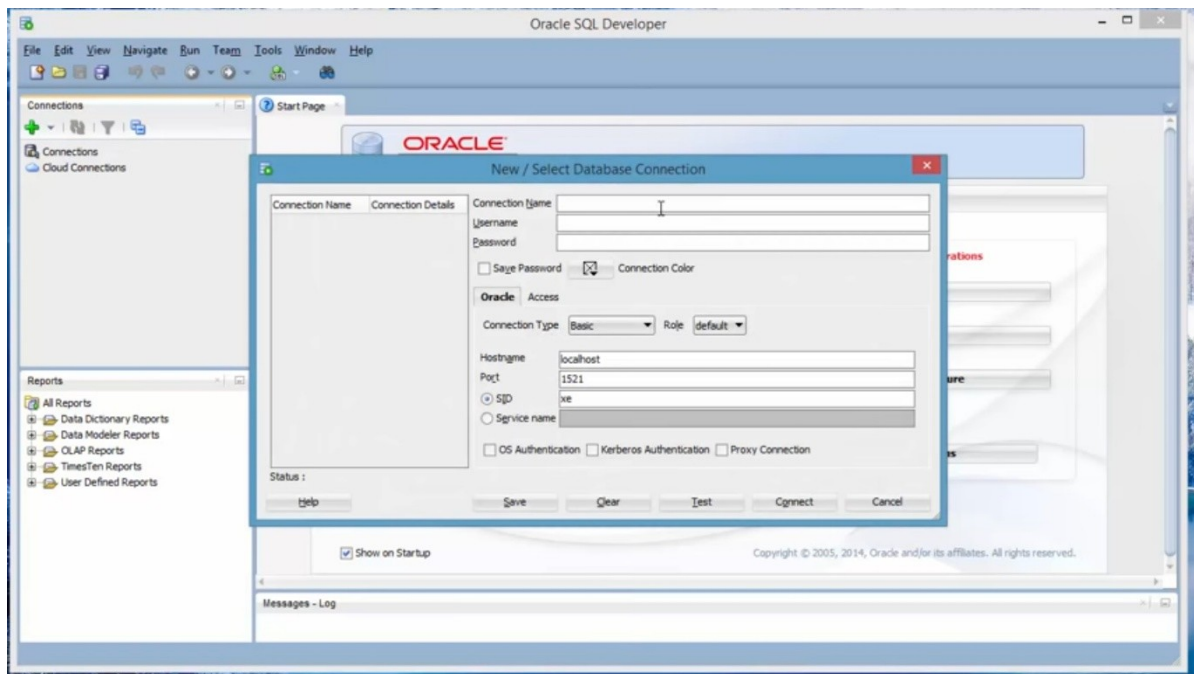

We set the `net_service_name` and host address as the same name of our server name and set the protocol which would be used to connect to Oracle database

We then opened SqlDeveloper and clicked on the '+' sign on the upper left section of the

screen.

After clicking on the add connection sign, it would pop up a window which would let us fill the further information which would require to connect to Oracle database

In the first field we can set the connection name as per as our choice. In the second and third field,

The username and password will be the same of that of the server we made while installing Oracle server. Connection type would be 'TNS' which would locate the tns file we just made. The role will be set to SYSDBA. After setting up all the information we would click on connect which will help connect the Oracle database to Oracle SQL developer.

- 5 On the next day, we were told to connect Oracle to SQLPLUS. We opened the command prompt and typed in SqlPlus. This opened up SqlPlus in Cmd. We then entered username and password and connected to our database successfully.

```
Administrator: C:\Windows\system32\cmd.exe - sqlplus / as sysdba

c:\>set ORACLE_SID=finance
c:\>echo %ORACLE_SID%
finance
c:\>sqlplus / as sysdba
SQL*Plus: Release 11.1.0.6.0 - Production on Sat Jan 7 23:54:28 2012
Copyright (c) 1982, 2007, Oracle. All rights reserved.

Connected to:
Oracle Database 11g Enterprise Edition Release 11.1.0.6.0 - Production
With the Partitioning, Oracle Label Security, OLAP, Data Mining
and Real Application Testing options

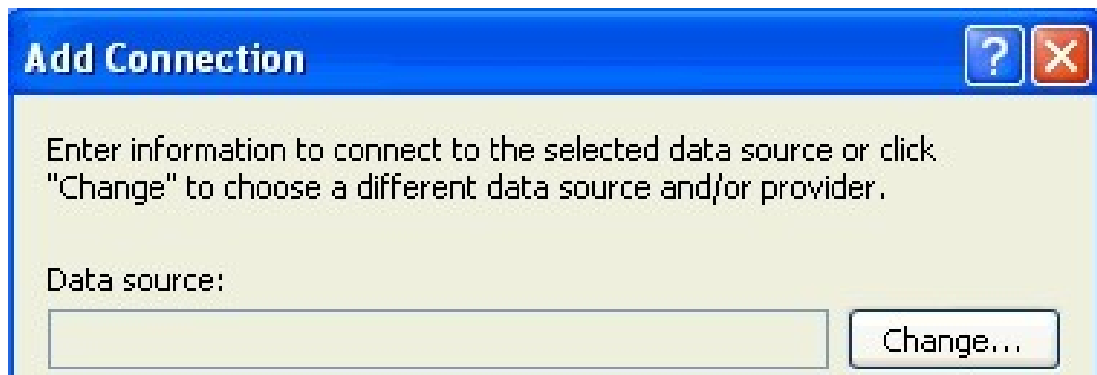

SQL> show user;
USER is "SYS"
SQL> _
```

To connect to the database:

1. From the View menu, select Server Explorer.
2. In Server Explorer, right-click Data Connections.
3. Select Add Connection.

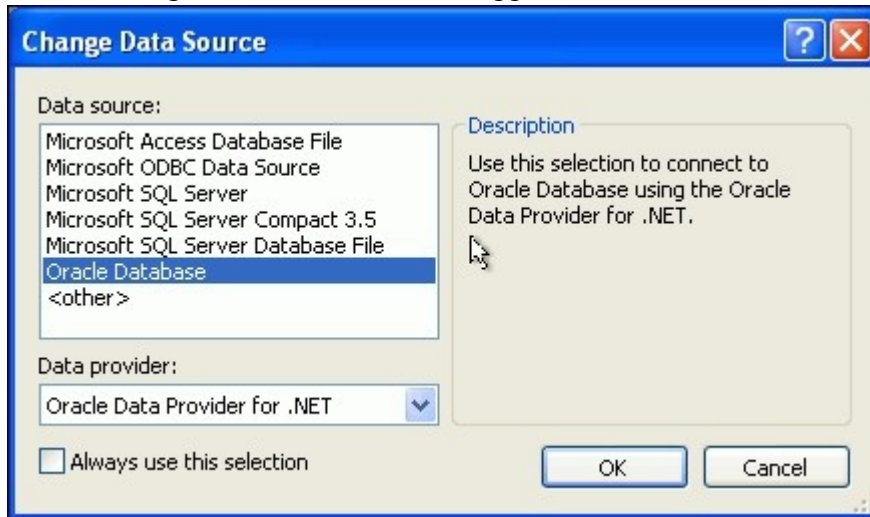

4. When the Add Connection window appears, determine if the Data source says Oracle Database (Oracle ODP.NET). If it doesn't skip to step 6.

If Data source does not say Oracle Database (Oracle ODP.NET), select Change.

The Change Data Source window appears.

5. Choose Oracle Database and then select Oracle Data Provider for .NET.
6. On the Connection Details tab, in the Add Connection window, enter the following information:

Data source name: For this example, use the alias of the remote database instance, `orcl`.

If you are connecting to a database on the same computer, use the `Local Database`.

Select the Use a specific user name and password option.

For User name, enter the username for the server

For Password, enter the password created when the `the server` account was unlocked and set up.

To save the password for future sessions, check the Save password box.

Ensure that Role is set to `SYSDBA`. This refers to the SYSDBA roles that have been granted to the user

The Connection name should be generated automatically from the Data source name and the User name values.

6	I arrived at Rashtriya Chemical Fertilizers administrative building and presented a PowerPoint presentation on Bluetooth architecture. Talked about its history and its architecture and the types of Bluetooth networks: Piconets and scatternet
---	---

Weekly summarization of the above activities:

Learnt about Oracle database. Made a client account to connect to the server. Connected it to Oracle SQL developer, Oracle SqlPlus, and Visual Studio 2012 and made a PowerPoint presentation on Bluetooth architecture

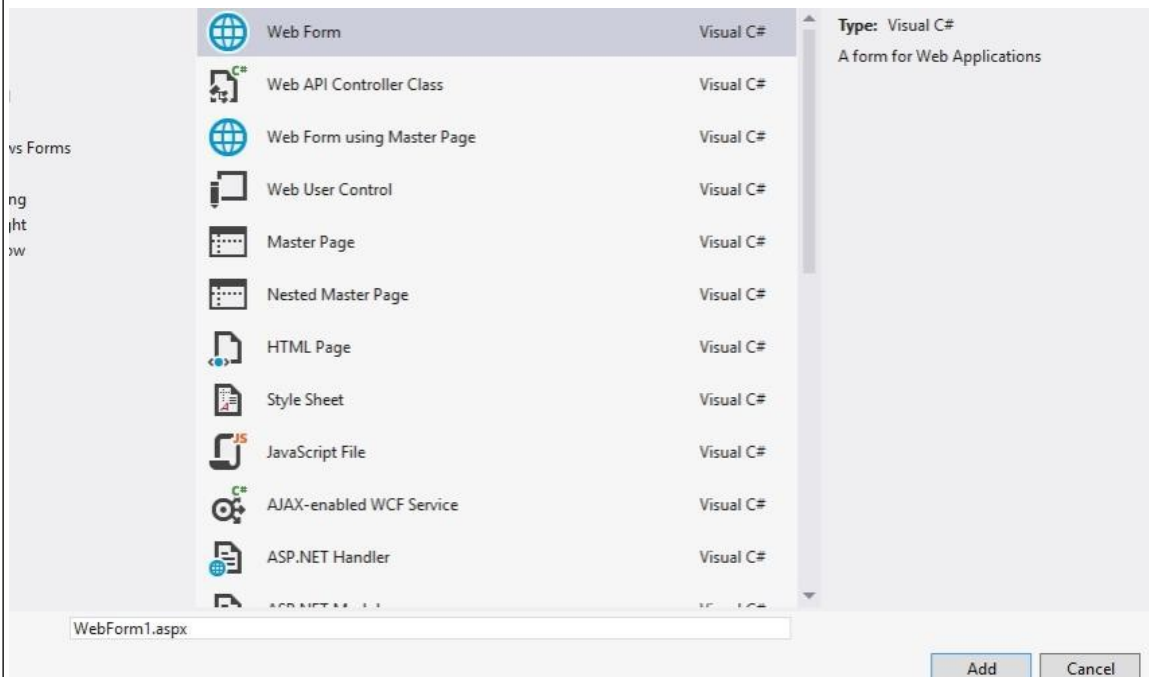

Signature of Student..... Signature of Industrial Supervisor.....

Week 4 : From 10-6-19 To 15-6-19

Expected work: Testing and quality assurance process.

Day	Activities carried out
1	<p>Testing of a software:</p> <p>Software testing is defined as an activity to check whether the actual results match the expected results and to ensure that the software system is Defect free. It involves execution of a software component or system component to evaluate one or more properties of interest.</p> <p>Software testing also helps to identify errors, gaps or missing requirements in contrary to the actual requirements. It can be either done manually or using automated tools. Some prefer saying Software testing as a White Box and Black Box Testing.</p> <p>Testing Approaches:</p> <p>White Box Testing: It is also called as Glass Box, Clear Box , Structural Testing. White Box Testing is based on applications internal code structure. In white-box testing, an internal perspective of the system, as well as programming skills, are used to design test cases. This testing is usually done at the unit level.</p> <p>Black Box Testing: It is also called Behavioural/Specification-Based/Input-Output Testing. Black Box Testing is a software testing method in which testers evaluate the functionality of the software under test without looking at the internal code structure.</p> <p>Grey Box Testing: Grey box is the combination of both White Box and Black Box Testing. The tester who works on this type of testing needs to have access to design documents. This helps to create better test cases in this process.</p> <p>Testing Levels:</p> <p>Unit Testing:</p> <p>Unit Testing is done to check whether the individual modules of the source code are working properly. i .e. testing each and every unit of the application separately by the developer in the developer's environment. It is AKA Module Testing or Component Testing</p> <p>Integration Testing: Integration Testing is the process of testing the connectivity or data transfer between a couple of unit tested modules. It is AKA I&T Testing or String Testing. It is subdivided</p>

	<p>into Top-Down Approach, Bottom-Up Approach and Sandwich Approach (Combination of Top Down and Bottom Up).</p> <p>System Testing (end to end testing): It's a black box testing . Testing the fully integrated application this is also called as end to end scenario testing. To ensure that the software works in all intended target systems. Verify thorough testing of every input in the application to check for desired outputs. Testing of the users experiences with the application.</p> <p>Acceptance Testing: To obtain customer sign-off so that software can be delivered and payments received. Types of Acceptance Testing are Alpha, Beta & Gamma Testing.</p>
2	<p>Quality Assurance Process:</p> <p>Quality assurance has a defined cycle called PDCA cycle or Deming cycle. The phases of this cycle are:</p> <ul style="list-style-type: none"> • Plan • Do • Check • Act <p>These above steps are repeated to ensure that processes followed in the organization are evaluated and improved on a periodic basis. Let's look into the above steps in detail • Plan - Organization should plan and establish the process related objectives and determine the processes that are required to deliver a high-Quality end product.</p> <ul style="list-style-type: none"> • Do - Development and testing of Processes and also " do" changes in the processes • Check - Monitoring of processes, modify the processes , and check whether it meets the predetermined objectives • Act - Implement actions that are necessary to achieve improvements in the processes <p>An organization must use Quality Assurance to ensure that the product is designed and implemented with correct procedures. This helps reduce problems and errors, in the final product.</p>
3	<p>On this day, we were told to make a login page which would accept username and password using Oracle database. To implement the login page we had to make a new form with extension aspx. We right clicked on WebApplication and clicked on add-→new item... and selected "Web Form" with extension .aspx. We imported our login.html code into the new Web Form application. We then started converting all the HTML inputs fields and buttons into asp format to support the C# methods and function that will be needed for the login page.</p>

//Source Code

	<pre> <i class="fab fa-facebook-f fa-fw"></i> Login with Facebook </form> </hr> <div class="text-center"> Forgot Password? </div> <div class="text-center"> Create an Account! </div> </div> </div> </div> </div> </div> </div> </div> <!-- Bootstrap core JavaScript--> <script src="vendor/jquery/jquery.min.js"></script> <script src="vendor/bootstrap/js/bootstrap.bundle.min.js"></script> <!-- Core plugin JavaScript--> <script src="vendor/jquery-easing/jquery.easing.min.js"></script> <!-- Custom scripts for all pages--> <script src="js/sb-admin-2.min.js"></script> </body> </html> </pre>
4	<p>We started making a table which would store the Username and Password In Oracle Database. We first opened the Oracle Developers application and clicked on '+' Add connection icon and connected to the server we previously made at the time of installation of Oracle. We then right clicked on Tables → New Table to start creating a Table in the database.</p> <p>//Source Code</p> <pre> CREATE TABLE XYZ.TABLE (NAME VARCHAR2(20) ,PASSWORD VARCHAR2(20)); </pre>

We then started making our table schema and starting adding Usernames and Passwords that would be required for our login web page.

- 5 We then started implementing our C# code in login. We first tried connecting our login.aspx form with our Oracle database after connecting it we connected it to the table we made which contained Username and Password. The code would check if the Username and Password entered by the user matches the Username and Password contained in the table we had made earlier.

```
//Source code for login.aspx.cs;

using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;
using Oracle.ManagedDataAccess.Client;
using Oracle.ManagedDataAccess.EntityFramework;
using System.Data;

namespace WebApplication17
{
    public partial class Login : System.Web.UI.Page
    {
        OracleConnection con = new OracleConnection();
        OracleCommand cmd = new OracleCommand();
        OracleDataAdapter da = new OracleDataAdapter();
        DataSet ds = new DataSet();

        protected void Page_Load(object sender, EventArgs e)
        {
            string ConnectionString;
            con.ConnectionString = " Data Source = (DESCRIPTION = " +
                "(ADDRESS_LIST = " +
                " (ADDRESS = (PROTOCOL = TCP)(HOST = 172.60.1.203)(PORT = 1521))" +
                ") " +
                "(CONNECT_DATA = " +
                " (SERVICE_NAME = purchase)" +
                ") " +
                "); User id=xyz ; password=ora12c;";
            con.Open();
        }

        protected void Button_log_Click(object sender, EventArgs e)
        {
            cmd.CommandText = "select * from try where name='" + Email.Text + "'and pass='" +
                Password.Text + "'";
            cmd.Connection = con;
            da.SelectCommand = cmd;
            da.Fill(ds, "try");
            if (ds.Tables[0].Rows.Count > 0)
            {

```

	<pre> Response.Redirect("Form1.aspx"); } else { ClientScript.RegisterStartupScript(this.GetType(), "alert", "alert('Invalid user and password');", true); } } } } //Source code for login.aspx.designer.cs; </pre>
6	Gave a presentation on 'History of computers'. Talked about about it in brief(From Abacus to Fifth generation) and explained about it's uses and types.

Weekly summarization of the above activities:

Converted our login HTML page to aspx. Made a table schema and added different Username and Passwords which would be checked by the login page. If the username and password were incorrect it would display an error message.

Signature of Student.....

Signature of Industrial Supervisor.....

Week 5: From 17-6-19 To 22-6-19

Expected Work: Study of preventive and breakdown maintenance & safety practical adopted in industry.

List the Sections of Industry visited and list

- i. The major machines/plants whose preventive and breakdown maintenance procedures studied.
- ii. The major safety practices adopted in the industry.
- iii. Organization chart of the industry with responsibilities of different departments/posts.

Day	Activities carried out
1	<p>SAP Hardware:</p> <ol style="list-style-type: none">1. In total there are 16 servers in this data center.2. All this 16 servers are maintained by cleaning them by certain interval of days.3. Server's logs are checked and if any faulty log is encountered then calls are raised and according actions are taken.4. Driver Updating is done whenever update is available. <p>ECM Hardware:</p> <ol style="list-style-type: none">1. There are ECM servers in the data centre.2. All of them are maintained by cleaning them by certain interval of days.3. Server's logs are checked and if any faulty log is encountered then calls are raised and according actions are taken.4. Driver Updating is done whenever update is available.
2	<p>Safety Practices in data centre:</p> <ol style="list-style-type: none">1. Fire Protection: Smoke detectors are available in case of fire. It detects fire within 1 min and emits novac gas within 30 sec. Whenever detected novac gas is emitted immediately.2. Water Leakage Detector: Cable sensor are available to detect the water leakage. Whenever water droplet drops onto the cable, cable detector creates gives a short, which indicates water leakage.

3. Rodent Repellent: Rodent repellents are active so that rats or any other small mammal do not destroy any equipment. Frequencies continuously beeps and this is how rodents are kept away.

4. Access Control: Biometric and cards are available to access control.

Name of Staff & their Designation

- Mr VIVEK RAMCHANDRA PATIL. - [CHIEF MANAGER (IT)]
- Mr ABHIJIT AVINASH SAWANT - [OFFICER (IT)]
- Mr KULDEEP M MANRAL - [OFFICER (IT)]
- Mr SANJAY SUKHDEO PETKAR - [CHIEF MANAGER (IT)]
- Mr JITU BHAGWANDAS KHANCHANDANI - [SENIOR MANAGER] (IT)
- Mr SANDEEP GANPATRAO JADHAV - [SENIOR MANAGER (IT)]
- Mrs SWATIPRASHANT PAWAR - [SENIOR MANAGER (IT)]
- Mr DHANANJAY PRALHAD KULKARNI- [MANAGER (IT)]
- Mrs SAVITA NITIN DHENDE - [MANAGER (IT)]
- Mr SUBODHCHANDRA SUDHAKAR DESHPANDE - [CHIEF MANAGER (IT)]
- Mr ROHAN YASHWANT BAGUL- [DEPUTY MANAGER (IT)]
- Ms TEJAL RITESH SHIRSAT- [SENIOR ENGINEER (IT)]
- Mr JASHAN JAWAHAR LAL JAIN KOSHAL. - [SENIOR ENGINEER (IT)]

3 On this day, we were told to accept values from form1.html and store them into the Oracle database. We had to apply insertion and updation on it. We made a table schema which

	COLUMN_NAME	DATA_TYPE	NULLABLE	DATA_DEFAULT	COLUMN_ID	COMMENTS
1	PURCHASE_R...	DATE	Yes	(null)	3 (null)	
2	ENTER_PURC...	NUMBER	No	(null)	2 (null)	
3	MATERIAL_D...	VARCHAR2(20 BYTE)	Yes	(null)	5 (null)	
4	TENDER_TYPE	VARCHAR2(20 BYTE)	Yes	(null)	6 (null)	
5	MODE_OF_TE...	VARCHAR2(20 BYTE)	Yes	(null)	7 (null)	
6	TYPE_OF_TE...	VARCHAR2(20 BYTE)	Yes	(null)	8 (null)	
7	TYPE_OF_PU...	VARCHAR2(20 BYTE)	Yes	(null)	1 (null)	
8	INDENTOR	VARCHAR2(20 BYTE)	Yes	(null)	4 (null)	

We had to assign a primary key which would help in updating the database if the unique ID is same .To implement the code we had to make a new form with extension aspx. We right clicked on WebApplication and clicked on add-→new item... and selected “Web Form”with extension .aspx. We imported our code into the new Web Form application. We then started converting all the HTML inputs fields and buttons into asp format to support the C# methods and function that will be needed for the login page.

```

- 4 We then started connecting our web page to Oracle database to start insertion and deletion. We used c# to perform this operation. With the help of 'if and else' condition and SQL we successfully inserted data into the table.

```
//C# code
```

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;
using Oracle.ManagedDataAccess.Client;
using Oracle.ManagedDataAccess.EntityFramework;
using System.Data;
```

```
namespace WebApplication29
```

```
{
    public partial class Form1 : System.Web.UI.Page
    {
```

```
        OracleConnection con = new OracleConnection();
        OracleCommand cmd = new OracleCommand();
        OracleDataAdapter da = new OracleDataAdapter();
        DataSet ds = new DataSet();
```

```
        protected void Page_Load(object sender, EventArgs e)
        {
```

```
            string ConnectionString;
            con.ConnectionString = " Data Source = (DESCRIPTION = " +
            "(ADDRESS_LIST = " +
            " (ADDRESS = (PROTOCOL = TCP)(HOST = 172.60.1.203)(PORT = 1521))" +
            ")" +
            "(CONNECT_DATA = " +
            " (SERVICE_NAME = purchase)" +
            ")" +
            "); User id=xyz ; password=ora12c;";
            con.Open();
```

```
        }
```

```
        protected void button4_Click(object sender, EventArgs e)
```

```
        {
            Response.Redirect("Form2.aspx");
        }
```

```

protected void button3_Click(object sender, EventArgs e)
{
    DateTime dt = new DateTime();

    cmd.CommandText = "select Enter_purchase_requisition_no from Form_1 where
Enter_purchase_requisition_no =" + Convert.ToInt32(Text1.Text) + """;
    cmd.Connection = con;
    da.SelectCommand = cmd;
    da.Fill(ds, "Form_1");
    if (ds.Tables[0].Rows.Count > 0)
    {
        cmd.CommandText = "update Form_1 set Type_of_purchase= " +
DropDownList1.Text + ",Purchase_requisition_receive_date=TO_DATE(" + text23.Text +

1	111	45	06-JUN-19	25-JUN-19
2	2	78	20-MAR-12	20-APR-12

- 6 We arrived at RCF admin building and were lectured on stress management. We were given different activities and exercises to reveal stress and improve our social skills/communication with others.

Weekly summarization of the above activities:

Converted form 1 and form 2 to aspx. Created schemas for them using Oracle Developer and implemented insertion and updation using Visual Studio. We then attended a stress management session and learnt how we can prevent stress in our day to day lifes.

Signature of Student.....

Signature of Industrial Supervisor.....

Week 6: From 24-6-19 To 29-6-19

Expected Work:

List the sections of Industry visited and list the major manuals/broachers such as operational manual, safety manual, maintenance manual, quality manuals referred/studied there for preparation of reports.

Day	Activities carried out
1	<p>Major manuals</p> <ol style="list-style-type: none">1. 6 We arrived at admin building and collected our certificate. This concluded the end for our internship

Weekly summarization of the above activities:

Converted form 3, 4 5 into aspx. Created schemas for them using Oracle Developer and implemented insertion and updation using Visual Studio and successfully completed our project.
